➤ Portfolio

DATA / AI ENGINEER · Seeking a permanent role · Remote or Nantes

PROFILE

Final-year Data / AI Engineer at Polytech Nantes, on a work-study contract at IOD Solutions (a Data & AI consultancy). I design and deploy production data and AI solutions that address concrete business challenges across diverse sectors — industry, insurance, real estate, social, finance and more. A value-driven approach with measured results. Seeking a permanent role, remote or in Nantes.

EXPERIENCE

AI Consultant — IOD Solutions

SINCE 2025

Work-study · client engagements

Nantes

CGR International — Quotation-assistance tool (vision LLM + full-stack)

- Designed and deployed **to production** a quotation-assistance tool: a vision LLM (Gemini) reads heterogeneous technical drawings and extracts typed specifications (material, dimensions, tolerances) that feed the pricing calculator.
- Led prompt engineering, built a field-by-field evaluation system (in-house then Langfuse, **85 to 96%**) and developed the full-stack application (FastAPI / SQLAlchemy async / PostgreSQL, React, S3, Docker, Logfire).

Valloire Habitat — Multi-source real-estate scoring platform

- Designed a complete **data-to-decision** chain (multi-source collection, configurable scoring, reporting) helping this social landlord prioritize its land opportunities.
- Integrated about ten public data sources (INSEE, BPE, Sitadel...) and scrapers for specialized platforms; n8n orchestration, GCP / Firestore deployment.

Oderis — AI classification of due-diligence documents at scale

- Designed an automatic slide-classification pipeline (cascade: rules → embeddings → LLM arbiter on ambiguous cases), at a scale of **over 250,000 slides**.
- Cut processing time from several minutes to around twenty seconds per batch; sensitive data anonymized locally (GDPR) before any external call.

SKILLS

AI / LLM

LLMs in production (Gemini, OpenAI, Mistral, Claude API), vision LLMs, agents, fine-tuning, **RAG** (FAISS, BM25, pgvector), embeddings (BGE-M3), structured outputs (Pydantic), evaluation (Langfuse)

MACHINE LEARNING / DATA SCIENCE

Supervised & unsupervised learning, scikit-learn, PyTorch, clustering (UMAP, HDBSCAN, k-means), NLP (spaCy), GDPR anonymization (Presidio, GLiNER)

DATA ENGINEERING

ETL / ELT pipelines, multi-source integration (REST APIs), scraping (Playwright, Selenium), BigQuery, dbt / Dataform, PostgreSQL / pgvector, MongoDB, n8n

BACKEND & WEB

Python, FastAPI, SQLAlchemy async, Pydantic, API REST · React, TypeScript, Next.js, Node.js

CLOUD / DEVOPS

GCP (Cloud Run, BigQuery, Pub/Sub, Firestore), Docker, CI/CD (GitHub Actions), Terraform, Linux

PROGRAMMING LANGUAGES

Python, TypeScript, SQL, Java

VOLUNTEERING

Secretary-General of the **CAEXAP** association · volunteer at **WAL** (We Are Lovers) · board member of the Polytech Nantes **Dev Club** · organizing committee of **LHA** (inclusive access to education).

— IOD Solutions · engagements (cont'd)

IGAM — Unsupervised NLP email detection

- Designed an end-to-end unsupervised NLP pipeline (secure ingestion, GDPR anonymization, topic clustering, summarization) to structure a large volume of unlabeled emails.
- Validated on a reference corpus (**ARI 0.88 / F1 0.94**) then scaled to **~43,000 real emails**, fully self-hosted.

Other client engagements

- **Loyoly** — architected an event-driven data platform on GCP (RabbitMQ, Pub/Sub, BigQuery, Dataform, Terraform) for an e-commerce loyalty scale-up.
- **Vermont** — built a RAG pipeline (Claude API, FAISS + BM25) generating R&D tax-credit (CIR) reports, with source traceability.
- **Naovie** (university-hospital endowment fund) — automated the synchronization of HelloAsso donations to the CRM (API) and emails, with idempotency robust to webhook retries.

EARLIER EXPERIENCE

Full-Stack Developer — ABISARL

JUN - SEP 2023

Administrative-modernization web platform (fisheries & animal industries) — UML, TypeScript / Next.js frontend, Java / Spring Boot backend, PaaS deployment.

Douala

Front-end Web Developer — GLOM

JUL - OCT 2021

End-of-degree internship: 20+ features for a driving-school management SaaS, React / Material-UI, team of 5 over 3 months.
